DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on September 16, 2003 has been entered.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 6-13 and 15-17 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 6-13 and 15-17 of U.S. Patent No. US 6,655,756 to Riddiford et al. Although the conflicting claims are not identical, they are not patentably distinct from each other because the step of determining a chamber pressure in the actuator apply chamber (as recited in the instant application) broadly encapsulates the step of estimating a chamber pressure in the actuator apply chamber as recited in US 6,655,756.

Allowable Subject Matter

4. Claims 1-5, 14 and 18-20 are allowed.

Art Unit: 3683

5. The following is a statement of reasons for the indication of allowable subject matter: with regards to claims 1 and 14, the prior art of record fails to anticipate or render obvious a force generating apparatus and method for modifying an electrical force signal of the force generating apparatus, wherein the signal is modified to limit the rate at which fluid pressure in the apply chamber is reduced during a fast release mode to a predetermined rate low enough to preclude a change in modulus of the fluid during fast mode release; with regards to claim 5, the prior art of record fails to anticipate or render obvious a force generating apparatus, wherein an electrical signal is modified during fast mode release, and wherein a solenoid is located between an apply chamber of the force generating apparatus and a force applying element
